

FINDING AND ANALYSING THE PHISHING EMAILS:

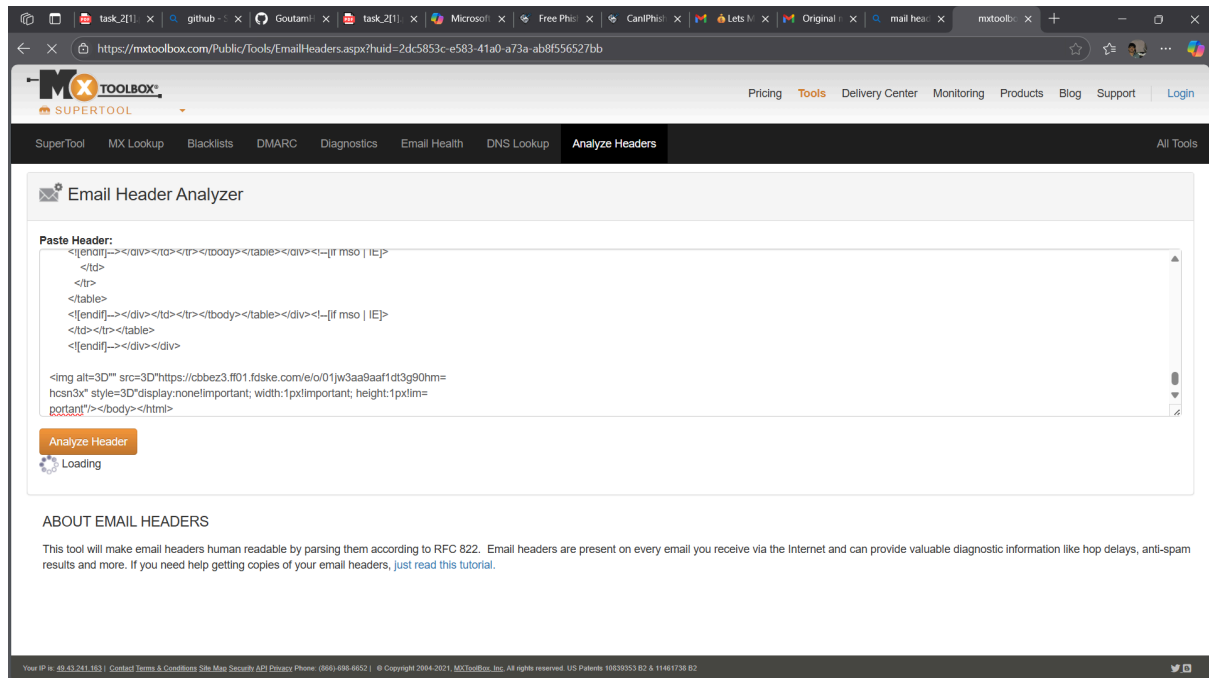

STEP 01: first select the suspicious email or take a emails which are already present as phishing email examples.

STEP 02: Here i took basi spam email for tutorial. Firstly know which type of email software are you using. If you are using google's Gmail you should open the email and click on the 3 dots. Select the show original option to see header.

STEP 03: after selecting that option you will see the header and copy it to clipboard.

STEP 04: Paste it in header analysing tool Here I took mxtoolbox for header analysing

STEP 05: Click on the analyze header and you will get the sender information and also ip address.

The screenshot shows the MXToolbox website's 'Analyze Headers' tool. The browser's address bar displays the URL: <https://mxtoolbox.com/Public/Tools/EmailHeaders.aspx?huid=2dc5853c-e583-41a0-a73a-ab8f556527bb>. The page title is 'Header Analyzed' with the email subject 'Email Subject: 🚀 Lets Make Money Goutam Hegde'. A 'Copy/Paste Warning' box states: 'Copy/Pasting a header works for most people, but sometimes it can cause problems with things like DKIM Validation. For the best results, use our [Email Deliverability tool](#)'. The 'Delivery Information' section shows: DMARC Compliant, SPF Alignment, SPF Authenticated, DKIM Alignment, and DKIM Authenticated. The 'Relay Information' section shows 'Received: 0 seconds' and 'Delay:'. Below this is a diagram of an email relay path. A 'Snipping Tool' window is open in the bottom right corner, displaying the message: 'Screenshot copied to clipboard. Automatically saved to screenshots folder. Mark-up and share'.

Snipping Tool
Screenshot copied to clipboard
Automatically saved to screenshots folder.
Mark-up and share

STEP 05: Check that if you got all the right mark as wrong or some of them are wrong if it came wrong it means that the mail is phishing mail.

STEP 06: check the email came from authorised name or it has some spelling mistakes or contains greek letters.

THANK YOU
